

## For Immediate Release

# MPC Chooses NorthSeas Software for its New MailFRAME E-mail Archiving Appliance

January 3, 2008 (Ottawa, Canada) – NorthSeas AMT (*NorthSeas*) the pioneer of e-mail archiving software for appliance solutions, is pleased to announce that MPC Computers, subsidiary of MPC Corporation (AMEX: MPZ), has selected NorthSeas e-mail archiving software for its new MPC MailFRAME e-mail archiving appliance, launched on December 19, 2007. With its recent purchase of Gateway, Inc.'s (NYSE: GTW) Professional business, MPC is now one of the top PC companies serving the US professional market.

"We have worked together for over two years, and with each passing day, we realize what great harmony there is between our two companies," says Stephen P. Spence, President and CEO of NorthSeas. "It was only natural that the combination of MPC's hardware proficiency and passion for customer service, and our messaging and archiving expertise, should lead us to this innovative solution."

NorthSeas' vendor-neutral software automatically captures a copy of every message that passes through the mail-server, and records the header data and message-contents in a searchable database. The software also provides users with a browser-based self-search utility to quickly find messages and, if needed, redeliver them back from the archive into the user's inbox.

"Our goal with this new product was to deliver an infrastructure solution that integrates hardware and software into a single system that can be serviced and supported by MPC," said Greg Wolff, Area Vice President of Product Marketing at MPC. "Archiving email can be expensive and resource-intensive. MailFRAME will alleviate many of the common problems of email archiving because it's simple to deploy and maintain, and easy to use."

Gary Gregg of the City of Southlake, an MPC customer, is very pleased with his new MailFRAME: "After taking less than one minute, I was able to configure an account on the MailFRAME for our City Secretary and give her instructions on how to search mail in less than five minutes ..... We have over 900,000 messages stored already and most searches still take less than three seconds."

## **About NorthSeas**

NorthSeas was founded in 2003 on the principle that business critical information solutions do not need to be complicated and expensive. The company has emerged as a leading supplier of simple, open, effective and vendor-independent e-mail archiving solutions for the small-midsize enterprise market. NorthSeas technology is available through distributors and resellers in nineteen countries in Europe, Asia,
